

# Installation Help

## USB/DVD Login Credentials

Use password below if asked anywhere  
esite.pk

Operating System (OS) Username: roshantech  
Password: esite.pk

Enterprise resource planning (ERP) Username: Aamir@eSite.pk  
Password: esite.pk

## Installation help

- Boot with the USB/DVD
  - Some computers show boot menu with F12, F9, F2 or Esc key during BIOS messages
- Before starting the installation
  - Choose 1 partition (20 GB or more) for ERP OS from your Windows/other OS (and remove this partition letter from the list of drives by going to disk management and remove drive letter, this saves your ERP partition of accidental removal from Windows)
- Start installation by clicking the icon 'Install ERP OS on your hard disk'
- Click 'System Copy'
- Next step is very crucial, be careful. You are going to select POS partition
  - Click the partition made for ERP OS
  - Select the mount point '/'
  - Select file system 'ext4'
  - Tick format if required (i.e partition was not formatted before)
  - Click 'Change partition settings' button with green colored icon (← symbol on it)
  - Tick "Copy user data files"
  - Click "Next" button & you are done with it :)
- Now wait for installation to finish & then restart system (please note: before restarting, remove ERP OS USB/DVD from the system)
